ARDEX A 38™ MIX
Rapid Set, Premixed Screed
Fast-setting, premixed, easy-to-use and high-performance screed

Note: The data herein applies to the ARDEX A 38 MIX 40 lb. (18 kg) bag which is pre-mixed with sand. For the ARDEX A 38 50 lb. (22.7 kg) bag not premixed with sand, see the appropriate technical data sheet.

Rapid hardening – walkable in 3 hours
Install tile and natural stone after only 4 hours
Suitable for bonded, unbonded or floating screeds
Premixed with sand for increased productivity
Exceeds the 28-day strength properties of ordinary screeds after just 1 day
Interior and exterior applications
Ideal for swimming pools and other wet areas
Install vinyl and wood floor coverings after just 48 hours
Can be used with in-floor heating systems
ARDEX A 38™ MIX
Rapid Set, Premixed Screed

Fast-setting, premixed, easy-to-use and high-performance screed

Description and Usage
ARDEX A 38™ MIX Rapid Set, Premixed Screed is a precision-engineered, polymer-modified, cement screed that sets, hardens and dries rapidly. Use for interior or exterior applications including swimming pools and other wet areas. ARDEX A 38 MIX can be walked on 3 hours after application and can receive tile or stone after just 4 hours, even when used as an unbonded or floating screed. After only 1 day, the compressive strength and tensile strength of ARDEX A 38 MIX exceed those that regular cement screeds achieve after 28 days.

ARDEX A 38 MIX can be used for bonded, unbonded or floating screeds. The screed is mixed and applied in the same way as ordinary cement / sand screeds and can be used with in-floor heating systems.

Substrate Preparation
Substrate and ambient temperatures must be a minimum of 50°F (10°C) for the installation of ARDEX products. For more detailed information on substrate preparation, please refer to the ARDEX Substrate Preparation Brochure at www.ardexamericas.com.

Concrete Preparation - Bonded Screed
All concrete substrates must be solid, structurally sound, thoroughly clean and free of oil, wax, grease, asphalt, gypsum and latex compounds, curing compounds, sealers and any contaminant that might act as a bond breaker. If necessary, mechanically clean the floor down to sound, solid concrete by shot blasting or similar. Over-watered, frozen or otherwise weak concrete surfaces must also be cleaned down to sound, solid concrete by mechanical methods. Sanding equipment is not an effective method to remove curing and sealing compounds. Acid etching, adhesive removers, solvents and sweeping compounds are not acceptable means for cleaning the substrate.

The concrete must be profiled to a minimum ICRI concrete surface profile of 3 (CSP #3). Any additional preparation required to achieve this must likewise be mechanical.

Note on Asbestos-Containing Materials
Please note that when removing existing flooring, any asbestos-containing materials should be handled and disposed of in accordance with applicable federal, state and local regulations.

Preparation for Unbonded and Floating Screeds
Ensure that the substrate surface is reasonably flat prior to proceeding with the installation. Place expansion strips around the perimeter of the installation space and any columns within to provide a gap for screed movement.

Recommended Tools
Forced action mixer (such as pan, trough or paddle mixer); for bonded screeds, a mixing container, drill, mixing paddle and stiff bristle brush for mixing and applying the bonding slurry.

Joints and Cracks
Under no circumstances should ARDEX A 38 MIX be installed over any moving joints or moving cracks. All existing expansion joints, isolation joints and construction joints, as well as all moving cracks, must be honored up through the underlayment and flooring.

Bay divisions and expansion joints should be incorporated, as with regular cement/sand screeds per TCNA standards.

Dormant control joints and dormant cracks greater than a hairline (1/32” / 0.79 mm) must be pre-filled with a two-part, low viscosity, 100% solids, rigid crack and joint filler, such as ARDEX ARDIFIX™. Once the dormant cracks and dormant saw cuts have been filled properly, broadcast sand to refusal, and allow these areas to cure thoroughly (45 minutes for ARDEX ARDIFIX). Remove all excess sand prior to proceeding with the ARDEX A 38 installation.

Please be advised that while dormant control joints and dormant cracks must be filled prior to installing finish flooring, this filling is not intended to act as a repair method that will eliminate the possibility of joints and cracks telegraphing. ARDEX A 38 MIX is a non-structural material and is, therefore, unable to restrain movement within the substrate. This means that while some dormant joints and dormant cracks may not telegraph up into the finish flooring, cracks will telegraph in any area that exhibits movement, such as an active crack, an expansion or isolation joint, or an area where dissimilar substrates meet. We know of no method to prevent this telegraphing from occurring.
Mixing and Application

For one 40 lb. (18 kg) bag of ARDEX A 38 MIX, use 44 oz. (1.3 L) of clean water. **DO NOT OVERWATER!** Additional water will weaken the compound and lower its strength. Place the ARDEX A 38 MIX into the forced action mixer, mix until sand and powder are well blended, and then add the water. Mix to a normal screed mortar consistency. When a sample of mortar is squeezed in the hand the sample should retain its shape and not crumble, the hand being left slightly moist. When a sample is compacted on the base, no film of water should form on the surface.

The selected mixer must be of a pan, trough or other forced action type. Normal ‘free-fall’ mixers are not suitable for mixing semi-dry screed mortars. Use clean equipment.

The working time of the mixed screed is approximately 60 minutes at 70°F (21°C). Mix an appropriate amount of material so that mixing, placing, compaction and finish troweling can be completed within this working time. The pot life of ARDEX A 38 MIX is approximately 60 minutes at 70°F (21°C).

**Bonded Screeds**

To install ARDEX A 38 MIX as a bonded screed, an ARDEX A 38 MIX bonding slurry must be applied first. Using 8 parts ARDEX A 38 MIX, 1 part ARDEX E 100™ Screed Improvement and Bonding Slurry Additive and 1 part water by volume, prepare and apply the bonding slurry as follows:

1. Pour the water and the ARDEX E 100 into the mixing container first.
2. Add the ARDEX A 38 MIX to the mixing container.
3. Using a drill and mixing paddle, mix to a creamy consistency.
4. Scrub the bonding slurry into the prepared concrete using a stiff bristle brush.
5. Immediately apply the ARDEX A 38 MIX lift while the slurry coat is still wet. If the slurry coat is allowed to dry, it must be removed mechanically and reapplied before the ARDEX A 38 MIX lift is applied.

After mixing, apply the ARDEX A 38 MIX to the substrate with the flat side of a steel trowel to obtain a solid mechanical bond before applying the desired thickness.

**Bonding Adjacent Sections**

Where a new section is placed against a set and hardened screed, it is recommended that the ARDEX A 38 MIX bonding slurry be used to join the adjacent sections.

**Thickness of Application**

ARDEX A 38 MIX thickness requirements will depend on the type of application, as shown in the chart below.

<table>
<thead>
<tr>
<th>Screed Type</th>
<th>Minimum Thickness</th>
<th>Maximum Thickness</th>
</tr>

**Use as a Pre-Smoothing Compound beneath ARDEX MC™ Moisture Control Systems**

If using ARDEX A 38 MIX as a pre-smoothing compound beneath an ARDEX MC™ Moisture Control System, allow the ARDEX A 38 MIX to cure 24 hours (70°F/21°C) prior to following the instructions for installing the selected ARDEX MC system in the appropriate technical data sheet. Please note that the ARDEX A 38 MIX must be finished to a minimum ICRI Concrete Surface Profile of 3 (CSP #3) to receive an ARDEX MC system. If this profile has not been achieved, it will be necessary to shot blast the ARDEX A 38 MIX after the minimum 24-hour cure.

**Installation of Flooring and Waterproofing**

ARDEX A 38 MIX is not to be used as a permanent wear surface, even if coated or sealed.

**Self-Leveling or Patching over ARDEX A 38 MIX with ARDEX Underlayment**

If self-leveling or patching is required over the ARDEX A 38 MIX, first allow the ARDEX A 38 MIX to cure 48 hours (70°F / 21°C). For self-leveling applications, prime with ARDEX P 51 diluted 1:1 with water, and allow the ARDEX P 51 to dry a minimum of 3 hours (max. 24 hours). Follow the instructions in the appropriate ARDEX underlayment technical data sheet for installation and cure of the selected ARDEX underlayment.
Flooring/Waterproofing

Allow the ARDEX A 38 MIX to cure 4 hours (70°F / 21°C) prior to installing tile and natural stone or waterproofing with ARDEX 8+9™ Rapid Waterproofing and Crack Isolation Compound. Allow the ARDEX A 38 MIX to cure 48 hours (70°F/21°C) prior to installing vinyl or wood flooring.

In-Floor Heating

Where ARDEX A 38 MIX has been installed over an in-floor heating system, proceed as follows:

1. Allow the ARDEX A 38 MIX to cure 3 days prior to turning the heating system temperature to 77°F (25°C).
2. Maintain this temperature for 3 days prior to turning the heating system temperature to its maximum operating temperature. ARDEX recommends that this temperature not exceed 85°F (29.4°C).
3. Maintain this temperature for 4 days prior to turning the heating system off and allowing the floor to cool to room temperature.
4. Proceed with the installation of tile or natural stone.

Notes

FOR PROFESSIONAL USE ONLY.

This product is not a vapor barrier, and will allow free passage of moisture. Follow the directives of the floor covering manufacturer regarding the maximum allowable substrate moisture content and test the substrate prior to installing ARDEX A 38 MIX. Where substrate moisture exceeds the maximum allowed, See the instructions section for using ARDEX A 38 MIX as a pre-smoothing compound beneath ARDEX MCTM Moisture Control Systems. Alternatively, ARDEX A 38 MIX could be installed in an unbonded application if moisture is excessive.

Always install an adequate number of properly located test areas, including the finish flooring, to determine the suitability of the products for the intended use. As floor coverings vary, always contact and rely upon the floor covering manufacturer for specific directives, such as maximum allowable moisture content, adhesive selection and intended end use of the product.

Never mix with cement or additives other than ARDEX-approved products. Observe the basic rules of concrete work. Do not install below 50°F (10°C) surface and air temperatures. Install quickly if the substrate is warm, and follow warm weather instructions available from the ARDEX Technical Service Department.

Dispose of packaging and residue in accordance with federal, state and local waste disposal regulations. Do not flush material down drains.

Precautions

Carefully read and follow all precautions and warnings on the product label. For complete safety information, please refer to the Safety Data Sheet (SDS) available at www.ardexamericas.com.
Technical Data According To ARDEX
Quality Standards
All data based on a mixing ratio of (1) 40 lb. bag (18 kg) ARDEX A 38 MIX and 44 oz. (1.3 L) water by volume at 70°F (21°C). Physical properties are typical values and not specifications.

| Mixing Ratio: | Do not exceed 44 oz. (1.3 L) of water per 40 lb. (18 kg) bag |
| Coverage: | 7 - 8 sq. ft. per bag at 3/4” (0.65 - 0.74 sq. m at 18 mm) |
| Coverage will vary depending on the texture of the surface being smoothed. |
| Compressive Strength (ASTM C109/Mod – Air cure only): | 6,300 psi (441 kg/cm²) at 28 days |
| Flexural Strength (ASTM C348): | 775 psi (54 kg/cm²) at 28 days |
| Working Time: | 60 minutes |
| Walkable: | 3 hours |
| Install Tile / Waterproofing: | 4 hours |
| VOC: | 0 |
| Packaging: | 40 lb. (18 kg) bag |
| Storage: | Store in a cool, dry area. Do not leave bags exposed to sun. Protect unused material by removing air from bag and sealing tightly. |
| Shelf Life: | 1 year, if unopened |
| Warranty: | ARDEX Engineered Cements Standard Limited Warranty applies. Also eligible for the ARDEX SystemOne™ Warranty when used in conjunction with select ARDEX tile and stone setting materials |
